

Technical Presentation: “Transitioning from Cobalt-60 to e-beam or X-ray for Sterilization - A Model for Collaboration”

Mark Murphy

Mr. Murphy has worked as a research scientist and manager at Pacific Northwest National Laboratory for over 30 years. He has expertise in a broad range of radiation dosimetry, radiation field metrology, and experimental design for irradiation studies. This dosimetry and radiation metrology work has covered a wide range of applications, including nuclear worker protection, radiation effects on materials and electronics, radiation therapy, radiation biology, and radiation processing. He currently is the lead PI for the NNSA/ORS Team Nablo project.
